

User Story	To-Do	In Progress	Done
As a developer, I want to collaborate via shared source code.			Set up github and developer environment (2) - Jon Decide meeting time for scrum meetings (1) Either use github for pending issues or another platform like JIRA (1)
As a developer, I want a Go backend (web server) to serve static content.			Have a skeleton for future RESTful API (4) Use a framework (Gin) for speed and simplicity (3) - Juan Write simple handler functions to serve static content (2)
As a developer, I want a DBMS to manage data.			Connect to the database, and create tables or insert/replace data.. (5) - Finn Download and install SQLite3 and spend time familiarizing ourselves with basic SQL queries (5)
As a developer, I want to scrape PISA for course-meeting relationships.			Use existing Python modules (beautifulsoup, requests) to scrape each page. (15) - Jon Leverage regex matching to extract specific subsets of information, like days of the week. (4) - Alexis Grab several years worth of data to acquire a list of unique locations we can account for. (4) Look at the HTML source code by manually clicking through the class search pages. (6)
